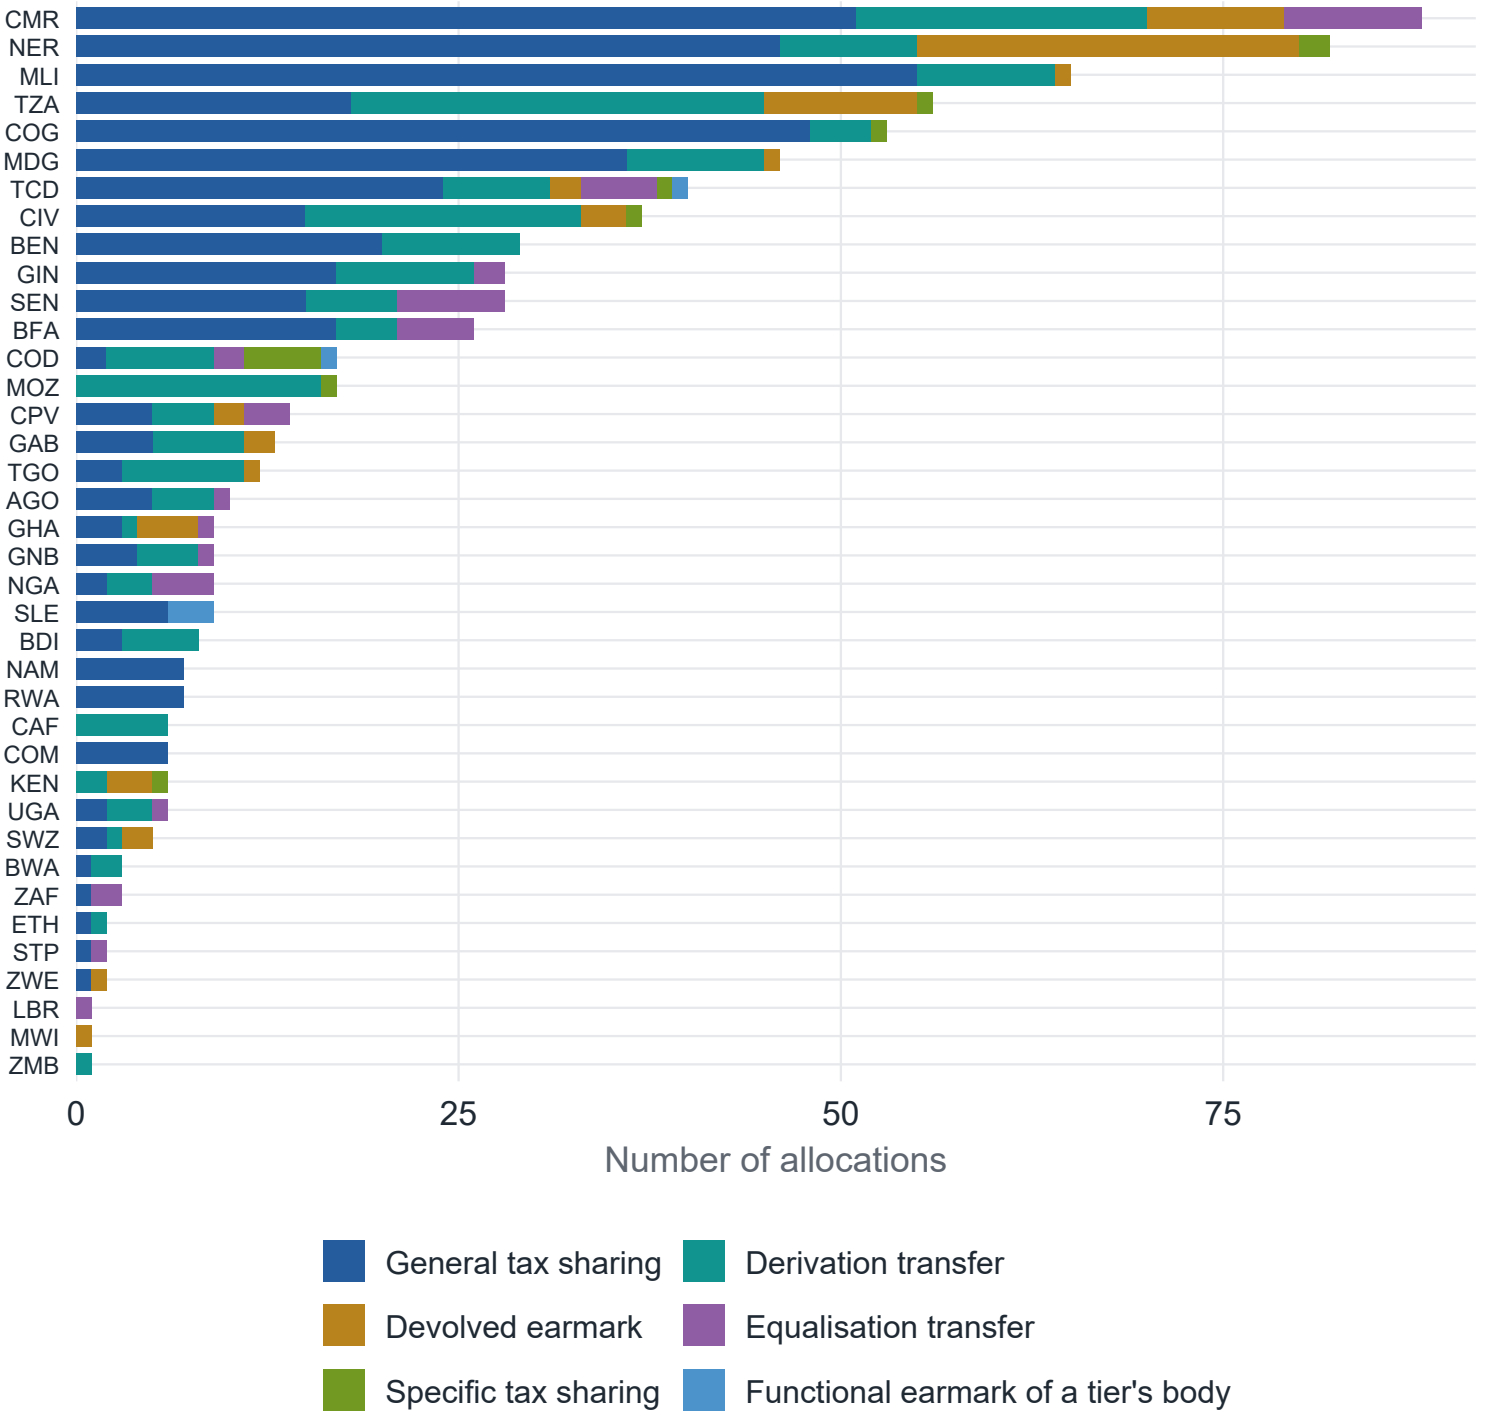
Subnational allocations, by type of sharing



Unit: allocation to or through a subnational tier (recipient_level = subnational),
all share levels, a pool counted once (n = 763 in 38 countries; 5 countries have none).
Assigned instruments and classes of charges (E1 + E2 + E3), social contributions excluded.
Counts, not revenue: a sub-key (a share of a share) counts as an allocation of its own.
Raw counts depend on corpus completeness.
